ANALYTICS PROJECTS

FINTECH TRANSACTION INTELLIGENCE

- Built an **end-to-end fintech analytics project** using Python, BigQuery SQL, and Power BI to analyse 13.31M transactions and \$706.9M in gross transaction value.
- Designed a **dashboard** covering executive KPIs, customer segmentation, card performance, merchant categories, fraud risk, and operational errors.
- Identified **key business insights**, including 33.8% value contribution from top 10% customers, higher online fraud risk, and 211.39K error transactions driven mainly by insufficient balance.
- Proposed **C-level recommendations** to strengthen online fraud controls, retain high-value customers, optimise debit payment reliability, and reduce preventable payment failures.

SUPPLY CHAIN PERFORMANCE INTELLIGENCE

- Built an interactive multi-page Power BI dashboard to track revenue, orders, customer segments, lead time, completion rate, and cancellation performance.
- Used Power Query, data modeling, and DAX measures to clean, transform, connect, and calculate key business metrics.
- Designed KPI cards, slicers, drill-down visuals, trend charts, matrix tables, and executive summary pages to support business performance monitoring.
- Applied data visualization and dashboard storytelling principles to turn operational data into clear, structured, and stakeholder-friendly reports.
